

Easy Migration from any softswitch to iTel Switch Plus ver 2.0

Get-set-go VoIP in three easy steps

Now it's easy for VoIP service providers & resellers to migrate from existing softswitch to iTel Switch Plus. The entire migration process involves a couple of hours (as projected for 8 GB database) and our support engineers to work on it.

For hosted softswitch owners it becomes even easier to migrate to iTel Switch Plus as all database, live (running) calls, remaining balance and traffic is carefully transferred to iTel Switch Plus. The process of migration involves simple 3 steps that are mentioned below:

STEP 1

Softswitch owner needs to provide the access of their existing softswitch to their account manager or REVE's support team, REVE's efficient support engineers will start the migration process at the backend.

STEP 2

REVE's support engineer will now copy the entire database from existing switch with the help of exclusive data migration tools and then the database and the other important information is transferred to iTel Switch Plus database management system.

STEP 3

After the migration is over, migrating resellers or service providers can view all the important information** such as previous customer's pins, account balance, running calls and live traffic and all necessary billing information in their iTel Switch Plus database just by logging-in to REVE's proprietary switch-billing interface.

**Please note that CDR can't be migrated from existing softswitch to iTel Switch Plus.
